审稿意见

The authors arbitrarily selected the values of the hyperparameters of their network – what is the impact of the 3D patch size on the abilities of the model? What is the impact of the training set size on the generalization performance of the network? What is the impact of the batch size on the training process? (The current batch size is fairly small). Such questions remain open and should be investigated in a detailed sensitivity analysis.

实验

Patch Size	Dice Coefficient		
	Complete	Core	Enhancing
28x28x28	0.7891	0.7784	0.7784
33x33x33	0.8341	0.7985	0.7859
38x38x38	**0.8945**	**0.8483**	**0.8303**
43x43x43	0.8549	0.8463	0.8125
48x48x48	0.8353	0.8234	0.7804
